

Self-operated Temperature Regulators

Temperature Regulator Type 1u

Application

Temperature regulators for cooling installations · Control thermostats for set points ¹⁾ from -10 to 250 °C · G ½ to G 1 or DN 15 to 50 · Nominal pressure PN 25 · Suitable for liquids up to 150 °C and non-flammable gases up to 80 °C
The valve opens as the temperature rises.

The regulators consist of a globe valve with female thread (G ½ to G 1) or flanged body (DN 15 to 50) and a control thermostat, comprising a temperature sensor, set point adjuster with excess temperature protection, capillary tube and operating element.

Special features

- Low-maintenance P regulators requiring no auxiliary energy
- Wide set point range and convenient set point adjustment indicated on a dial
- Globe valves with plug balanced by a bellows (DN 32 to 50)
- Suitable for liquids, particularly for cooling media, e.g. cooling water and brine

Versions

Type 1u Temperature Regulators · Type 2121 Valve with G ½ to G 1 female thread, PN 25, unbalanced or Type 2121 Valve with flange DN 15 to 50, PN 25, balanced DN 32 to 50
Type 2231 to 2234 Control Thermostat

For details on the application of the control thermostats, refer to Information Sheet T 2010 EN.

Type 2121/2231 (Fig. 1) · With Type 2121 Valve and Type 2231 Control Thermostat for liquids · Set point adjustment at the sensor · Set points from -10 to +150 °C

Type 2121/2232 (Fig. 2) · With Type 2121 Valve and Type 2232 Control Thermostat for liquids and steam · Separate set point adjustment · Set points from -10 to +250 °C

Type 2121/2233 · With Type 2121 Valve and Type 2233 Control Thermostat for liquids, air and gases · Set point adjustment at the sensor · Set points from -10 to +150 °C

Type 2121/2234 · With Type 2121 Valve and Type 2234 Control Thermostat for liquids, steam, air and gases · Separate set point adjustment · Set points from -10 to +250 °C

Special version

- Capillary tube 5 m, 10 m, 15 m
- Sensor made of CrNiMo steel
- Capillary tube made of CrNiMo steel or plastic-coated copper

¹⁾ Special version for set points from -40 to +60 °C

Conversion of valve sizing coefficients

$$C_V \text{ (in US gallons/min)} = 1.17 \cdot K_{VS} \text{ (in m}^3/\text{h)}$$
$$K_{VS} \text{ (in m}^3/\text{h)} = 0.86 \cdot C_V \text{ (in US gallons/min)}$$

Fig. 1 · Type 1u Temperature Regulator (valve with female thread) with Type 2231 Control Thermostat

Fig. 2 · Type 1u Temperature Regulator (valve with flanged body) with Type 2231 Control Thermostat

- Version with minimum flow rate
- Plug with PTFE sealing ring
- Valve free of non-ferrous metal
- Version for oil at max. permissible temperature of 220 °C
- ANSI version on request (see Data Sheet T 2114 EN)

Principle of operation (see Fig. 3)

The regulators operate according to the liquid expansion principle.

The temperature sensor (13), capillary tube (10), and operating element (7) are filled with an expanding liquid. The liquid changes its volume depending on the temperature, causing the operating element (7) and thus the plug stem (5) with the plug (3) of the valve to move.

The position of the plug determines the flow rate of the heat transfer medium across the area released between the plug (3) and seat (2).

The temperature set point can be adjusted with a key (11) to a value that can be read off the dial (12).

Valve

- 1 Valve body
- 2 Valve seat (replaceable)
- 3 Valve plug
- 5 Plug stem
- 5.1 Spring
- 5.2 Balancing bellows
- 6 Threaded nipple with coupling nut

Control thermostat

- 7 Operating element
- 10 Capillary tube connection to the sensor
- 11 Key for set point adjustment
- 12 Set point dial
- 13 Temperature sensor (bulb sensor)

Flange	Steel	

Installation

• Valve

Install the valves in horizontal pipelines. The direction of flow must correspond with the arrow on the body. The connecting element must be vertically suspended.

• Temperature sensor

The temperature sensor can be installed in any desired position. Nevertheless, its entire length must be immersed in the process medium. Choose a place of installation where neither overheating nor considerable idle times occur.

Only use the same kind of materials together; thermowells made of stainless steel 1.4571, for example, can be installed in stainless steel heat exchangers.

• Capillary tube

Install the capillary tube such that it is not exposed to considerable temperature fluctuations and cannot be damaged. Make sure the permissible ambient temperature range (approx. ambient temperature: 20 °C) is not exceeded. The smallest possible bending radius is 50 mm.

Flow rate diagram for water

Valve sizing for other media according to IEC 60534, with the terms: $F_L = 0.95$ and $x_T = 0.75$. The values apply to a fully opened valve.

Thermowells typetested by DVGW (German gas & water assoc.) for flammable gases, G 1 threaded connection, PN 100

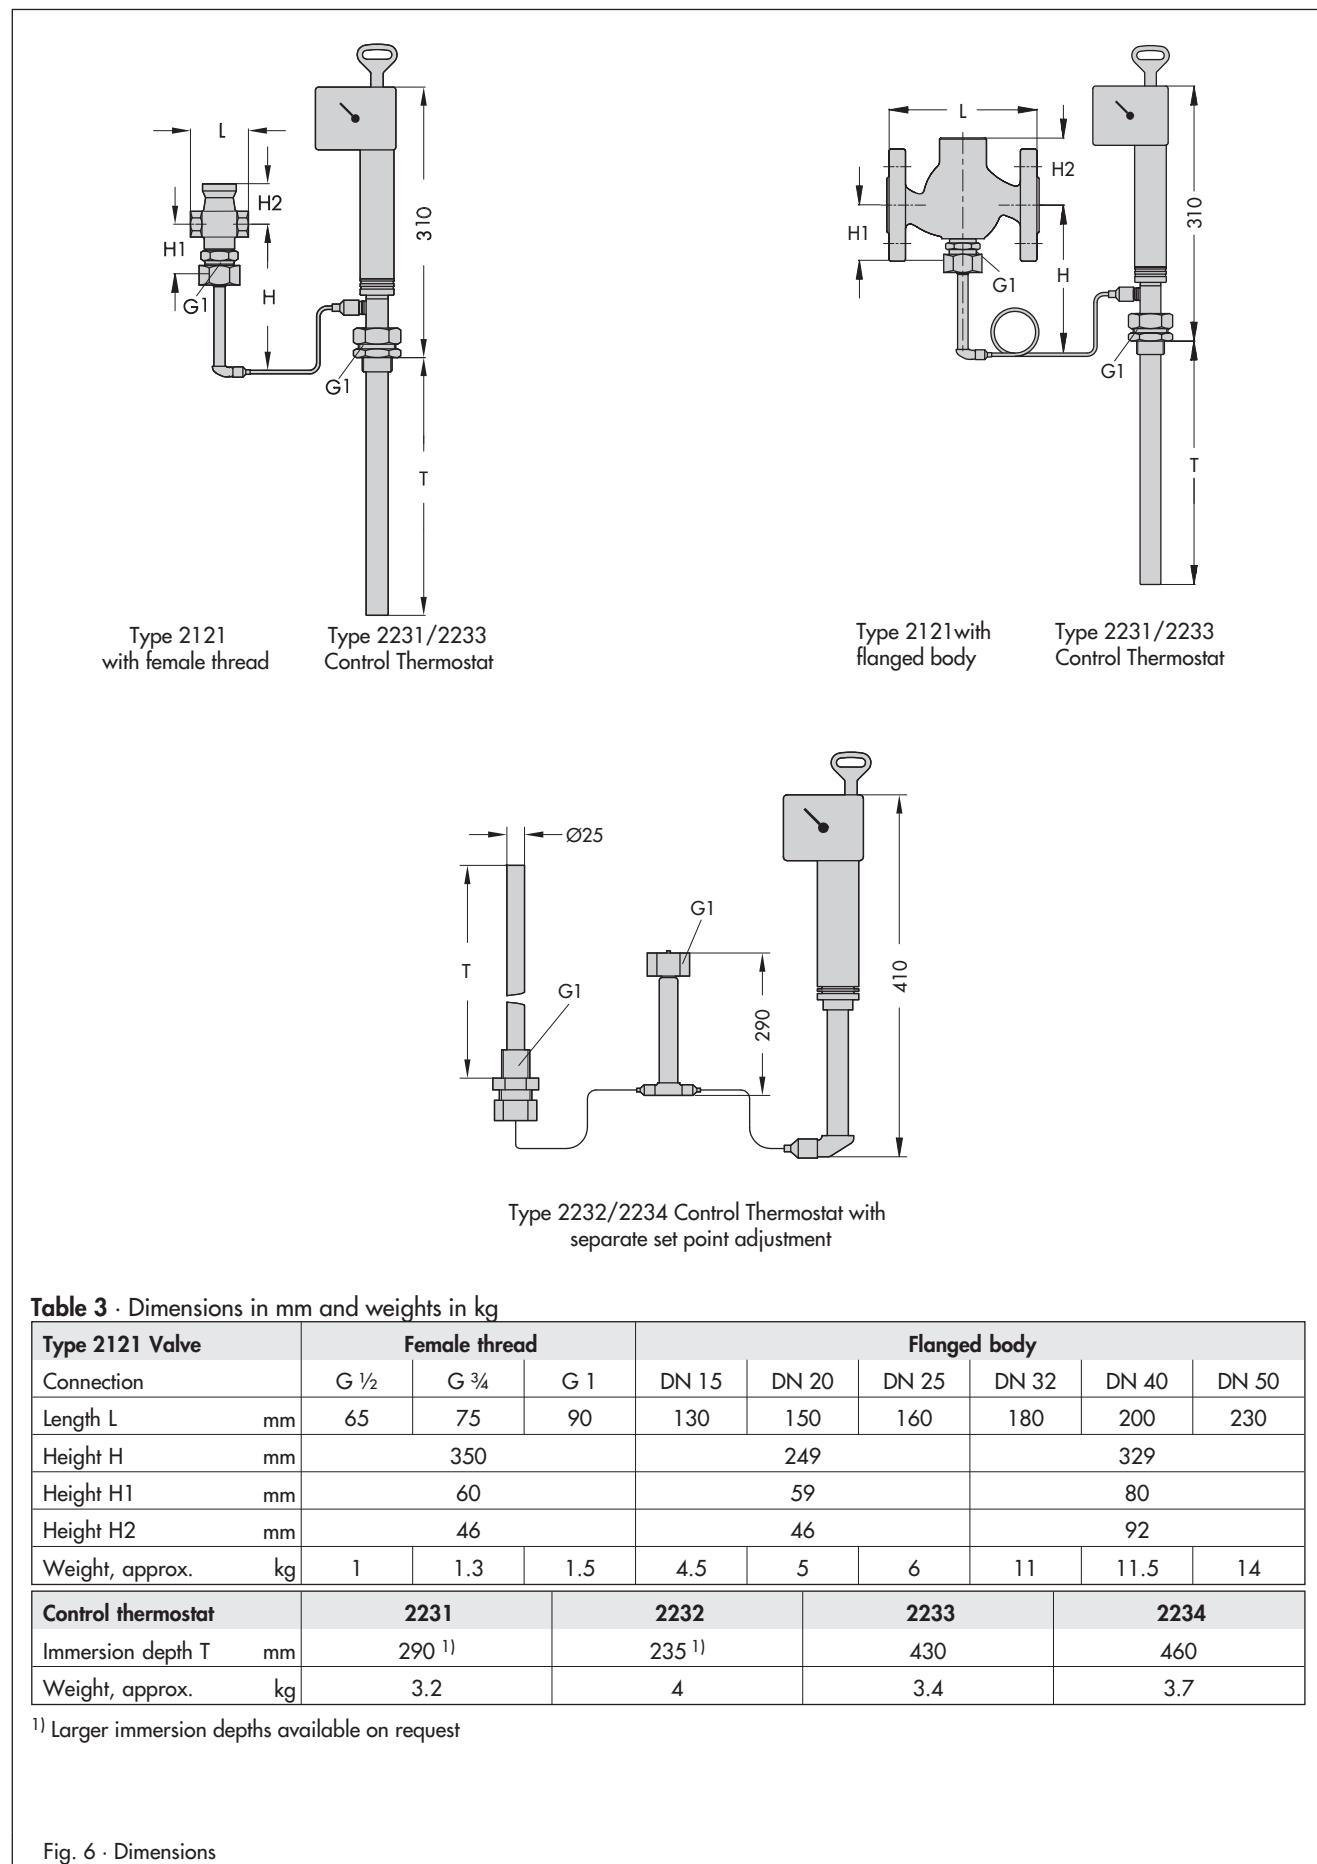

Mounting parts for Type 2233 and Type 2234 · Clamps for wall mounting · Perforated cover for thermostat

To protect the operating element against impermissible operating conditions, an extension piece or separating piece is mounted between the valve and operating element.

An **extension piece** is needed for temperatures over 220 °C. The standard version does not have sealing. The special version of the extension piece is made of stainless steel and has a bellows seal. It additionally acts as a separating piece.

In combinations with Type 2212 Safety Temperature Limiter or Type 2213 Safety Temperature Monitor, an extension piece is required for temperatures over 150 °C.

Dimensions

A **separating piece** is made of brass (for water and steam) or CrNi steel (for water and oil).

A separating piece must be used when a seal between thermostat and valve is required. Separating pieces made of CrNi steel must be used when all wetted parts are to be free of non-ferrous metals.

In addition, it prevents the medium from leaking while the thermostat is being replaced.

Manual adjuster Ma with travel indicator · MaS with electric signal transmitter

Dynamic behavior of the thermostats

The dynamics of the regulator are mainly determined by the response of the sensor with its characteristic time constant.

Table 3 lists the response times of SAMSON sensors operating on different principles when tested in water.

Table 3 · Dynamic response of SAMSON thermostats

Functional principle	Type ... Control Thermostat	Time constant in seconds	
		Without thermowell	With thermowell
Liquid expansion	2231	70	120
	2232	65	110
	2233	25	- ¹⁾
	2234	15	- ¹⁾
	2235	10	- ¹⁾
	2213	70	120
Adsorption	2212	- ¹⁾	40
